

Memoirs of the Royal Astronomical Society Volume 44-45

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1879 Excerpt: ...de leur proximite: la fonction perturbatrice totale sera donc, pour chaque satellite, composee de cinq parties se rapportant respectivement aux actions des trois autres satellites, a l'action du Soleil, et a laplatissement de Jupiter. Dans ce qui suit, nous designerons par des lettres sans accent les quantites qui se rapportent au premier satellite, et par les memes lettres affectees de 1, 2, 3 accents les quantites analogues relatives au 2e, au 3e et au 4e; les memes quantites relatives au soleil seront representees par les grandes lettres correspondantes. Par exemple, les masses des satellites et celles du soleil seront representees par les lettres m, m, m, m, J, respectivement. Appelons r et r1 les rayons vecteurs menes du centre de Jupiter aux centres de gravite du premier et du second satellite, et s le cosinus de l'angle compris entre ces rayons, et posons, suivant les notations employees dans les Annales de l'Observatoire de Paris, $R_{(0,0)} = (r_1 + 2r)S^{1-r}$; designons de meme par $R_{(0,2)}$, $R_{(0,3)}$, $R_{(0,0)}$ les fonctions analogues qu'on obtient en remplaçant dans $R_{(0,1)}$ les quantites relatives au second satellite, par les quantites relatives au troisieme, au quatrieme ou au Soleil. La fonction perturbatrice u qu'il faut considerer pour le premier satellite sera $u = \frac{mR_{(1,0)} + mR_{(W)} + mR_{(w)}}{R_{(0,r)} + V}$. On aura pareillement pour le second satellite $Q = \frac{mBxm + mR_{(W)} + mR_{(U)} + J^2 Ra, I + V}{R = (r^2 + rs - 2r) - JI}$ etc. Pour developper ces diverses fonctions, nous rapporterons les mouvements a un plan fixe passant par le centre de gravite...
